

# Where the Conversion Leaks Are

nomadinternet.com · CRO Recommendations · August 2026

The single most valuable conversion mechanism on this site is guiding users through the coverage and qualification process to view and select internet plans. This mechanism is bleeding value because critical forms are unusable, with evidence showing they "render without visible input fields or labels," and mobile usability is severely hampered as "every tap target [is] too small" due to a missing responsive viewport, collectively preventing users from completing essential steps.

|----|----------------------------------------------------------------------------------------------------------------------------------------------|----------|--------|------|
| 9  | <b>Confusing CTA Options</b><br>Multiple equally prominent calls to action on each page dilute user focus and create ambiguity about the...  | Medium   | Medium | 3/10 |
| 10 | <b>Inaccessible Controls</b><br>Five interactive controls lack accessible names, making them unusable for screen reader and voice control... | High     | Low    | 2/10 |

## How to read this

Findings marked **verified** were measured directly and are reproducible. Everything else is a hypothesis derived from inspecting the live pages, which is why the PXL evidence questions score zero for those items. Sized opportunities describe the prize if a change works, not expected revenue: roughly 10–30% of A/B tests produce a significant win, and winners tend to overstate their true effect.
